# DESEJA UNIR-SE À AAPG?

Caso seja estudante ou geólogo profissional, geofísico ou tenha afinidade com alguma das especialidades das geociências, convidamos você a unir-se à AAPG e a tornar-se membro da organização de Geólogos de Petróleo mais importante mundialmente.

A AAPG é uma organização geológica internacional sem fins lucrativos que tem sido o pilar da comunidade científica mundial desde a sua fundação em 1917. Seus propósitos são fomentar a investigação científica, promover as geociências e a tecnologia e, além disso, inspirar uma elevada conduta profissional, sendo uma associação de referência a nível mundial. A AAPG fornece publicações, conferências, oportunidades educativas para os geocientistas e divulga os mais recentes estudos geológicos para o público em geral.

A AAPG possui aproximadamente 100 Sociedades Afiliadas ao redor do mundo e mais de 8000 estudantes afiliados. Ela é composta por cerca de 26000 membros nos 129 países que integram a indústria petrolífera (*upstream*).

Se deseja saber mais sobre a AAPG, visite a nossa página [www.aapg.org](http://www.aapg.org)

**AAPG**

Latin America &  
Caribbean Region

# DESEJA UNIR-SE À AAPG?

## DIVISÕES

Atualmente, a AAPG é uma comunidade geocientífica que conta com uma variedade de divisões além da indústria do petróleo, as quais abordam diferentes aspectos das geociências. Você pode unir-se àquela com a qual tiver mais afinidade.

### **Divisão de Assuntos Profissionais** **(*Division of Professional Affairs - DPA*)**

- Promover o profissionalismo e as normas éticas.
- Fornecer um meio para a certificação profissional de geólogos de petróleo, geólogos de carvão e geofísicos de petróleo.
- Auxiliar no planejamento de carreira.
- Melhorar o bem-estar profissional dos membros da AAPG.

### **Divisão de Minerais de Energia** **(*Energy Minerals Division - EMD*)**

- Dedicada aos geólogos de energia que trabalham com recursos energéticos não convencionais e alternativos.
- Proporciona acesso à informação técnica sobre os últimos avanços nestes recursos.
- Apoia a AAPG, disponibilizando oportunidades e capacitação local e internacional através de seminários, cursos de curta duração e conferências.
- Fornece informações sobre recursos energéticos não convencionais e alternativos, bem como sobre sua exploração e desenvolvimento, ao público em geral e àqueles que não são membros da AAPG.
- O conjunto de membros da EMD é um *plus* adicional aos membros da AAPG.

**AAPG**

Latin America &  
Caribbean Region

# DESEJA UNIR-SE À AAPG?

## DIVISÕES

### Divisão de Geociências Ambientais (*Division of Environmental Geosciences- DEG*)

- Encarrega-se de fomentar o conhecimento e a investigação dos geólogos ambientais durante a exploração e o desenvolvimento de recursos energéticos convencionais, não convencionais e alternativos.
- Proporciona à AAPG uma visão geocientífica sobre tais assuntos.
- O conjunto de membros da DEG é um *plus* adicional aos membros da AAPG.

### Divisão de Estruturas Petroleiras e Geomecânica (*Petroleum Structures and Geomechanics Division PSGD*)

- Interessa-se pela geomecânica e pela geologia estrutural e tectônica.
- Enfoque em objetivos profundos, devido à sua importância, e/ou geomecanicamente complexos (incluindo não convencionais e subsalinos).
- Esta divisão está em crescimento, surgindo devido à carência de organizações reconhecidas que abordem esta temática.

**AAPG**

Latin America &  
Caribbean Region

# DESEJA UNIR-SE À AAPG?

## BENEFÍCIOS

- Ampliar seu conhecimento técnico, adquirir habilidades e ferramentas importantes para o desenvolvimento de sua carreira.
- Possibilidade de expor ou publicar seus trabalhos e/ou artigos técnico-científicos.
- Fazer parte da maior rede de geocientistas do mundo.
- Acesso às publicações (artigos, revistas, apresentações, etc.) e à informação atualizada.
- Obter descontos em eventos realizados pela AAPG e seus capítulos.
- Participação em programas educativos implementados pela AAPG.
- Participação em outros eventos da indústria com benefícios e/ou facilidades para aqueles que são membros da AAPG.

12 By DAVID BROWN, EXPLORER Correspondent

### EDUCATION ISSUE

## The Importance and the Challenge of Geoscience Education

**H**ere's a quick story about geoscience education, and how important it is: Lauren Branch lives in Orem, Utah, and teaches high school science courses. Branch said she is one of only a few credentialed Earth science teachers in Santa Barbara County and has the only upper-level high school geology class in the county. She is AAPG Foundation's 2013-14 Teacher of the Year.

When her students see the sheer amount of slick on the beach, they tend to associate it with oil drilling, service or production facilities, Branch said.

"When the geology is featured, the oil is not the main focus," she said.

As a geoscience instructor, Branch is able to teach her students about the petroleum system and the seepage of oil and heavy oil in the coastal area.

"Once they know that, they say 'Oh! So that's why the La Brea Tar Pits are where they are,'" she said.

**The Challenge**

And here's a quick anecdote about geoscience education, and how challenging it is:

Lauren Birgebauer is an assistant professor in the Department of Geology and Geophysics at the University of Utah in Salt Lake City. She received the AAPG Foundation's 2013 International Geoscience Educator award.

"We have to do more about getting students excited about geoscience in the first place. We pay a lot of attention to that in our classes," Birgebauer noted.

"It's all recognized that students who graduate with a degree in geoscience probably don't come to college to do that," she said.

So Birgebauer and her colleagues try to interest and inspire students about the various aspects of Earth science. Some of those students eventually make the decision to pursue a geoscience degree, some as late as their senior year.

"We attend our curriculum with a field experience and we have introductory courses that involve what some people call the 'lower' topics in geoscience," she said.

Birgebauer said that includes courses about structure, earthquakes, planetary science — "We have a Mars course just about Mars science" — the last environmental science, natural disasters, natural resources.

**Next Generation Science Standards**

At the high school level, the Next Generation Science Standards have started to take hold and are being used in science instruction in many states, including California. NGSS was developed by a consortium of state and professional associations to create a consistent, benchmarked approach to teaching science.

"The next is really, really hard for the thing they're going to test them on — a bit of the science standards they should have gotten," Branch said.

Even when Earth science is shown into a curriculum, geoscience teachers generally seemed pleased that students are being exposed to important fundamental concepts, Branch said she doesn't expect her

"The good news is, there's a very large Earth science component," Branch said. Earth and space science is one of the four core science-instruction areas at the high school level under NGSS. In theory, students should get through a balanced and multidisciplinary regimen.

In practice, "we have three years to teach all four years of the science," Branch said of her school district. That's because students continue to take a year each of biology, chemistry and physical courses, and Earth science is blended in.

Students are required to demonstrate knowledge and proficiency in all of the NGSS courses, however.

"The next is really, really hard for the thing they're going to test them on — a bit of the science standards they should have gotten," Branch said.

Even when Earth science is shown into a curriculum, geoscience teachers generally seemed pleased that students are being exposed to important fundamental concepts, Branch said she doesn't expect her

incoming students to have much in the way of previous Earth science training.

"Usually what happens is that I get the low-achieving kids in my science class and the kids I get will have been pulled out of science to remediate in math and English," Branch explained.

"Basically, the kids might have had some Earth science in the 6th grade, and they wouldn't get any more earth science" until high school, she added.

"Because of where she lives, Branch said, her students are aware that geology is an essential aspect of the oil and gas industry.

"I live in a very heavy oil basin. We have a lot of drilling — we definitely have the petroleum" she said.

Birgebauer also doesn't expect incoming students at her university to have a lot of background in Earth science education.

"At the college level, I think geoscience is a discipline that most K-12 students have had the exposure to," she said.

See Background page 13

## PUBLICATIONS

### AAPG Journals

Memor 111

Now Available

### 3-D Structural Interpretation: Earth, Mind, and Machine

Three-dimensional geologic interpretation of seismic and subsurface data requires integration of spatial cognitive skills, slick surface geologic memory, oil company geologic knowledge, and computer-aided interpretation skills to identify and describe subsurface structures. This book provides a comprehensive overview of the field, from the basic concepts of geologic interpretation to the advanced techniques of 3-D geologic interpretation.

This volume acts as a reference for geoscientists and students, which includes key points in the field of 3-D geologic interpretation, and is essential reading for geoscientists and students in the field.

## Bolivia Joins the Big Leagues

First AAPG workshop highlights the country's hydrocarbon potential

**B**olivia, like all South American gas market suppliers was a key theme at the Geoscience Technology Workshop Bolivia 2013, AAPG's first technical workshop in the country, held this summer in Santa Cruz de la Sierra.

The workshop, entitled "Optimizing Exploration and Development in Thin Gas and Forward Basins," drew 100 participants from 54 companies and 16 countries throughout the Americas, Europe, Asia and Australia.

by Petro-based Deco Parales, one of YPTD's principal consultants.

"Bolivia recovers the conventional resources in Bolivia are about 100 TCF, for unconventional resources the figure is four digits," he said.

Gálvez cited another goal for the country: transforming resources into reserves.

"It is geology that makes this transformation possible, and that is why it's pillar of our industry," he said.

He noted that Bolivia is a country with high prospectivity, a privileged geographical location and access to strong markets.

"There is interest in Bolivian gas, and not only from our neighbors. Today we envision LNG exports."

**National Attention**

The high-profile guests drew national attention, and took a media blitz covering the GTW described Bolivia as playing in the "big leagues."

All the national and independent companies competing in Bolivia attended the event, which included talks by the minister of hydrocarbons and the president of Yacimientos Petrolíferos Fiscales Bolivianos, the state-owned energy company.

Luis Alberto Gálvez, minister of hydrocarbons of the Plurinational State of Bolivia, inaugurated the event recognizing the significance of having AAPG in the country.

"This type of workshop is very important for us because it promotes an exchange of experiences between countries, knowledge of modern technologies and optimization of tools to be more efficient and to get results," he said. "One of our goals for the nation today is achieving ultra-efficient exploration."

Gálvez noted that in addition to exploring conventional resources, Bolivians need to learn more about the country's unconventional resource potential. He cited figures conducted

**Global Reach**

Interest in Bolivia brought an international audience to the GTW, which included 22 oral presentations, 22 posters and seven exhibitor stands representing companies in China, Australia, France, Argentina and Canada.

The general managers from YPTD (Chaco and YPTD Andes), YPTD upstream units, attended the event alongside regional managers from Repsol, Petrobras, Shell and Total.

The Bolivian Hydrocarbon Chamber of Commerce, Bolivian Geological Society and the SPE Bolivia section provided local support.

Event sponsors included Repsol, OTC DGG Petrobras, DecoParales, Petrobras, Halliburton and 3D Geo.

Clara Paredes Gómez, AAPG Latin America

GTW Bolivia featured 22 oral presentations, 22 posters, and seven exhibitor stands representing companies in China, Australia, France, Argentina and Canada.

## TIPOS DE AFILIAÇÃO

A AAPG possui os seguintes tipos de afiliação, as quais têm validade até o fim do ano fiscal (junho):

### ESTUDANTES

Para estudantes de geologia ou de um campo de estudos relacionado ou geralmente associado à geologia pertencentes a uma universidade com padrões acadêmicos aceitáveis.

**SEM CUSTO**

### FORMADOS

A adesão será paga pelos formados e ficará disponível até 2 anos depois da graduação (disponível somente para membros estudantis existentes).

**\$ 10**

### MEMBROS

Para aqueles que possuem licenciatura em ciências geológicas, com um ano de experiência de trabalho ou de magistério em geologia.

\* Custo para jovens profissionais

**A PARTIR DE \$ 41.25 \***

### ASSOCIADOS

Para aqueles que não são elegíveis para outras afiliações e cujo emprego está associado à geologia.

\* Custo para jovens profissionais

**A PARTIR DE \$ 41.25 \***

\* Custo anual de \$ 31.25, mais uma tarifa única de 10 \$.
